

Title: How to Download and Play videos

1) Minimum system requirements:

- Operating System: Windows 7 Home Premium Service Pack 1 or above, Windows 8, 8.1, Windows 10. (NOT Compatible With: Windows XP, Windows Vista, Windows 7 Starter, Windows 7 Basic, Windows 7 N Edition, Windows 7 KN Edition.)
- Ram: 2 GB free memory
- Processor: Core 2 Duo 2.0 GHz and above.

2) Before starting software download/activation:

- Make sure your system is virus free. If in doubt scan with a good anti-virus or format system before proceeding.
- Ensure All audio, video and system drivers are installed. If in doubt consult your computer dealer.

3) Goto the download link provided to you and download the zip file to any other drive besides the D drive. If your browser starts the download automatically without asking for the download path -> then let the download finish and then cut-paste the downloaded zip file to any other drive besides the C Drive. If you have only the one drive, that is only a C drive, then cut-paste the zip into the root of C Drive.

* It is recommended to use download manager software like IDM, DAP, Chrome Plugin Chrono Download Manager etc for downloading the zip.

4) Unzip the zip to a folder. You can do this by either right clicking the zip and selecting 'Extract to Folder xxxx' with the default folder name - OR - open the zip with Winzip, 7-zip, Win-Rar etc and extract the Zip to any folder name of your choosing.

5) In the Unzipped folder, Goto the 'HowToPlayVideos' folder. Only Videos in this folder can be played with Windows Media Player/VLC. Rest of the Videos on the pen drive/DVD/HDD CAN ONLY be watched through ContentBrowser software.

6) In 'HowToPlayVideos' folder, Watch video Video_1_HowToStartVideoSoftware.mp4 or read document HowToStartVideoSoftware.pdf.

7) After watching video Video_1_HowToStartVideoSoftware.mp4, goto DVD/Pen Drive/HDD folder and double click on ContentBrowser. Follow instructions as seen in video to activate the software.

8) You do not need to contact us to activate the videos/software. You can activate on your own using your personal 9 Character Serial Number: xxxxxxx . **Note that one serial number can be used on One PC Only.**

9) If any errors show up during activation/using software watch the other videos (or read the other documents) in the 'HowToPlayVideos' folder.

10) After activation Double Click on VideoPlayer.exe - if a blocked prompt shows up then click 'Show more' and UNCHECK - Always ask for this file - CheckBox -> Click OK. VideoPlayer will show 'Bad Path Error' - click OK to close VideoPlayer. These steps are also shown in Video_1_HowToStartVideoSoftware.mp4 video in the HowToPlayVideos folder.

11) While playing videos IF you get an error message like: "Incorrect version of Codec pack installed or corrupt Codec...", then please un-install DVD playing software from your computer like Cyberlink DVD Player, Lenevo DVD Player, Power DVD Player, any DVD burning software like Nero, Ashampoo etc.

12) If while playing videos you experience video freezing after seeking, playback speed changes taking a long time, audio/video mismatch etc. then uninstall any DVD playing/DVD burning software from your system like Nero, Nero Essentials, Ashampoo etc.

**** In the off chance that you are facing difficulty in starting the videos on your own, you can email us at: dgclasses4@gmail.com or call: +91 8329106981 ; +91 9168797733***

* If after activation, your system needs to be formatted for any reason, please contact us below BEFORE formatting your system, to help ensure playback of the videos after formatting.

* Things to NOT DO:

- DO NOT copy files from one Download folder to another pen Download folder. Even if the file names might be the same THEY ARE NOT THE SAME FILES.
- DO NOT RENAME FILES on the Download folder. Doing so will make the videos UnPlayable.
